

## ALQUERFEED BINMOLD

### DESCRIPTION

**ALQUERFEED BINMOLD** is a product in premix powder format based on aluminum-sodium-calcium-formate-propionate silicate hydrated 100%, designed to bind mycotoxins in cereals and feed and to preserve feed.

### TECHNICAL PROPERTIES

The aluminum-sodium-calcium-formate-propionate silicate of **ALQUERFEED BINMOLD** is a molecule developed by Biovet S.A. and whose procedure of fabrication has been patented in Spain. The molecule possesses a double mycotoxin binding and preservative effect thanks to its laminar three-dimensional structure which gives the molecule a great capacity to absorb mycotoxins. The formate and propionate present in the structure act as preservative due to its capacity to disorganize the bacterial and fungal cells.

As a preservative, acts basically on Gram-negative bacterias, yeasts and fungi, like *Salmonella spp.*, *Staphylococcus aureus*, *Escherichia coli*, *Clostridium spp.*, *Aspergillus spp.*, *Penicillium spp.*, *Fusarium spp.*

### INDICATIONS AND SPECIES

**ALQUERFEED BINMOLD** is designed to bind mycotoxins in cereals and feed and to preserve feed. It is destined for birds and pigs with the following properties:

- Prevents toxic effects of the mycotoxins in the animal.
- Protects the digestive mucus from lesions and irritations, while it promotes its regeneration.
- Detoxifies the liver.
- Prevents the appearance of diarrheas.
- Improves feed digestion.
- Works as a preservative of raw materials and compounded feeds.
- Affects the preservation of the feed favorably.

### COMPOSITION

Hydrated aluminum-sodium-calcium-formate-propionate silicate 100%.

### DOSAGE

It is administered mixed with feed at doses of 0.5-1 kg/ton.
