

# ALQUERFEED MOLDFIGHTER

## DESCRIPTION

Feed preservative in powder premix.

## TECHNICAL PROPERTIES

**ALQUERFEED MOLDFIGHTER** is an association of organic acids with an inhibitory activity of the metabolism of molds and bacteria that can be found in feed.

The inhibitory action takes place inside the micro organism through a decrease of the internal pH damaging enzymatic activity continuously with a result of the inhibition of glycolysis and bacterial growth.

**ALQUERFEED MOLDFIGHTER** affects Gram positive (*Staphylococcus* and *Streptococcus*), Gram negative (*Salmonella*, *E.coli* and *Proteus*), anaerobic bacteria (*Clostridium*) and molds.

For all these reasons the product acts as a preservative of feed controlling the non acid flora and the molds that cause the damage of the feed and the fungal and bacterial enteritis.

## INDICATIONS AND SPECIES

**ALQUERFEED MOLDFIGHTER** is intended for the prevention of bacterial and fungal contaminations as it has an inhibiting effect on their metabolisms. It can be used in the manufacturing of feed for all species and all ages.

## COMPOSITION

Propionic acid	350 g
Formic acid	100 g
Acetic acid	100 g
Sorbic acid	30 g
Excipient to 1 kg	

## DOSAGE

Used mixed with feed from 250 gram to 500 gram per ton. The dose depends on the level of contamination.

## PACKAGING

Bags of 25 kg.
