

ALQUERPLUS SINDIAR

DESCRIPTION

Preservative of silage in oral solution.

TECHNICAL PROPERTIES

Citric acid is an acidifier of intestinal tract. Due to its bactericidal properties it is used as a feed preservative. Hydrochloride acid is a natural component of the gastric juice. It is well known as a preservative.

Furthermore, **ALQUERPLUS SINDIAR** contains a synergistic mix of organic acid salts (ammonium propionate and formate) with inhibitory effect on the metabolisms of molds and bacteria, decreasing their internal pH so that enzymatic activity is affected, with the final result the death of the microorganism.

For all the above mentioned, **ALQUERPLUS SINDIAR** possesses preservative properties in feed and controlling the non acid intestinal flora and the moulds that cause damages to feed and bacterial and fungal enteritis.

INDICATIONS AND SPECIES

Intended as preservative of silage and for the treatment and prevention of gastroenteritis caused by *Clostridium spp*, *Salmonella spp*, colibacillosis, mycosis of gizzard and candidiasis.

Also for the improvement of the acid fixation capacity in feed (feed acidifier) for the early ages and acidification of the digestive apparatus in feeding changes.

COMPOSITION

Citric acid (E-330)	80 g
Ammonium propionate (E-284)	200 g
Ammonium formate (E-294)	200 g
Chlorhydric acid (E-507)	20 g

Excipient to 1 litre

DOSAGE

It is administered through drinking water or feed:

- As antidiarrhoeic, administered through drinking water from 1 to 2 ml or directly into the mouth, diluted in a 50% in sugary water at doses of 10 ml for piglets, lambs and kids and 50 ml for beef.
- As improver of acid fixation capacity in feed (acidifier), added to feed from 1 to 2 litres per ton.
- As silage agent, 10 litres per ton.

PACKAGING

Bottles of 1, 5 and 25 litres.
