

ALQUERFER

DESCRIPTION

Dextran iron in injectable solution.

TECHNICAL PROPERTIES

The administration of iron as a dextran-iron complex is a classic treatment for iron-deficiency anaemia. Its administration provides enough iron to increase the haemoglobin level and to normalize the number of erythrocytes.

Vitamin B12 is known as an extrinsic anti-anaemic factor, contributing together with iron to form haemoglobin.

INDICATIONS AND SPECIES

Intended for pigs, sheep, goats and cattle in the prevention and treatment of iron-deficiency anemia.

COMPOSITION

Dextran iron	100 mg
Vitamin B12	5 mg
Excipient to	1 ml

DOSAGE

It is administered intramuscularly at doses of:

- Piglets, lambs and young goats: Preventive treatment: 1 to 2 ml during the first week of life. Curative treatment: 2 ml every day.
- Calves: 5 ml.

INCOMPATIBILITIES

Do not mix with any other product in the same vial.

CONTRAINDICATIONS

In individual cases, anaphylactic reactions can be observed. They must be treated with antihistaminics and in case of severe reactions the animal must be treated with adrenalin and corticoids.

OVERDOSAGE

Ovedose is rare.

PACKAGING 100 ml glass vials.

WITHDRAWAL PERIOD Not necessary.
