

## DISIMAN

### DESCRIPTION

Disinfectant solution for the external disinfection of the mammary gland and premises, farm equipment and contaminated water.

### TECHNICAL PROPERTIES

Iodine acts against moulds, viruses and bacteria affecting their amino acids, having both a bactericide as well as a fungicide effect. However, the use of metallic iodine has some side effects such as irritation and corrosion. Therefore, iodine complexes are formed, that take advantage of the antiseptic properties of iodine, without the negative side-effects.

Lanolin is a substance with emulsifying and anti-irritative properties, that acts as a lubricant at the same time and increases the diffusion of iodine through the affected skin area.

### INDICATIONS AND SPECIES

Intended for sheep, goats and cattle for the external disinfection of the mammary gland and teat. It can also be used for the disinfection of premises, farm equipment and contaminated water.

### COMPOSITION

Iodine- nonilphenoxypoliethylenethanol	27.5 mg*
Lanolin	5 mg
Excipient to	1 ml

\* equivalent to 5500 p.p.m. of active iodine

### DOSAGE

It is administered externally, by washing or cleaning the teat in a glass containing DISIMAN.

As a disinfectant of premises and machinery a water solution with a concentration of 1 % must be prepared. It can also be used as a water disinfectant at doses of 0.5 to 1 ml/litre.

### PACKAGING

1 and 5 litre plastic bottles, 220 litre plastic container and 1000 litre plastic containers.

### WITHDRAWAL PERIOD

Not needed.
