

TRIVAC

DESCRIPTION

Inactivated injectable suspension containing Newcastle virus, *Pasteurella* and *Salmonella*.

TECHNICAL PROPERTIES

Newcastle disease is caused by a paramyxoviruses with several strains that differ in virulence. It causes high mortality and decreases in lay. The prophylaxis is done with vaccines composed of alive apathogenic virus or of inactivated viruses.

The inactivated vaccines are used to create antibodies for long periods in layers and breeders. This is why other germs that are important in farms can be added such as *Pasteurella* and *Salmonella* (cause diseases of vertical transmission).
